| 37-0015       | Blue         | 40         |

## Did you know?

LED lights are polarity sensitive. It is a smart idea to test LED assemblies, is not color coded prior to assembly.

### LED Polarity

Ever soldered a LED into your project backward it can really mess up a good day! If you don't know, LED's have a positive and a negative side, and will only light up when wired correctly. Most LED's have one longer lead to indicate the polarity, but not all.

### Warranty

**LED Boards** will be warranted only. No credit will be issued on any lamps or components with the 33 prefix. Lamps will either be exchanged or repaired and returned to the dealer.

This item contains a chemical that is known to cause cancer, or birth defects or other reproductive harm.
